Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

- (withdrawn) A method to assess bone mineral density in male subject, the method comprising:
 - a. measuring serum inhibin B level; and
 - correlating said serum inhibin B level with bone mineral density in said male subject.
- (withdrawn) The method of claim 1 wherein said bone mineral density is total bone mineral density.
- (withdrawn) The method of claim 1 wherein said bone mineral density is spine bone mineral density.
- (withdrawn) The method of claim 1 wherein said bone mineral density is hip bone mineral density.
- (withdrawn) The method of claim 1 wherein said serum inhibin B amount is correlated with idiopathic or involutional osteoporosis.
- (withdrawn) A method for diagnosis of increasing bone turnover leading to increased bone loss in premenopausal and postmenopausal women, the method comprising:
 - a. measuring serum inhibin A level; and
 - correlating said serum inhibin A level with increased bone loss in premenopausal and postmenopausal women.
- (withdrawn) The method of claim 6 further comprising correlating said serum inhibin A levels with a bone turnover marker.
- (withdrawn) The method of claim 7 wherein said bone turnover marker is selected from the group consisting of alkaline phosphatase, deoxypyridinoline, deoxypyridinoline, and C-

terminal peptide crosslinks of Collagen I.

- (withdrawn) A method for diagnosis of increasing bone turnover leading to increased bone loss in perimenopausal women, the method comprising:
 - measuring serum inhibin A level; and
 - correlating said serum inhibin A level with increased bone loss in perimenopausal women.
- (withdrawn) The method of claim 9 further comprising correlating said serum inhibin A levels with a bone turnover marker.
- 11. (withdrawn) The method of claim 10 with a bone turnover marker wherein said bone turnover marker is selected from the group consisting of alkaline phosphatase, deoxypyridinoline, deoxypyridinoline, and C-terminal peptide crosslinks of Collagen I.
- 12 (withdrawn) The method to detect increased bone turnover rates in premenopausal women subjects, comprising:
 - a. measuring serum concentration of inhibin A in said subject;
- detecting increased bone turnover rates in said subject based on the serum concentration of inhibin A.
- 13. (withdrawn) The method of claim 12 wherein said increased bone turnover rates are predictive of abnormal bone loss.
- 14. (withdrawn) The method of claim 12 wherein said serum is drawn between days 3 to 7 of the subject's menstrual cycle.
- 15. (withdrawn) The method to detect increased bone turnover rates in perimenopausal women subjects, comprising:
 - measuring serum concentration of inhibin B in said subject;
- detecting increased bone turnover rates in said subject based on the serum concentration of inhibin B.

- 16. (withdrawn) The method of claim 15 wherein said increased bone turnover rates are predictive of abnormal rates of bone loss.
- 17. (withdrawn) The method of claim 15 wherein said serum is drawn between days 3 to 7 of the subject's menstrual cycle.
- 18. (withdrawn) A method to predict bone formation in postmenopausal woman subjects, comprising:
 - a. measuring serum concentration of inhibin A in said subject; and
- b. predicting bone formation in said subject based on the serum concentration of inhibin A.
- 19. (currently amended) A method to increase cancellous bone strength and bone volume in a human subject comprising:

administering in a soluble form an effective amount of human inhibin A in a pharmaceutically acceptable carrier to said human subject to increase cancellous bone strength and bone volume.

- 20. (cancelled)
- 21. (currently amended) A method to increase cancellous bone strength and bone volume in a human subject comprising:

administering <u>in a soluble form</u> an effective amount of a human inhibin B in a pharmaceutically acceptable carrier to said human subject to increase bone volume and cancellous bone strength.

22. (cancelled)
